

A POST-DOCTORAL POSITION

is available at the *Molecular and Cellular Allergology* Unit, in the Department of Immunology of Institut Pasteur, Paris, France,

to work on **Mast Cell Signaling**.

The successful applicant will be entrusted with an innovative, ambitious collaborative research project on the dynamics of FcεRI signaling in mast cells based on proteomic analysis.

Candidates will possess a PhD in Immunology, Molecular Biology, Biochemistry or a related field. They will be enthusiastic, hard workers and highly motivated. They will have a strong background in Immunology and Cell Signaling. They will master Biochemistry and Cellular Biology techniques. They will have an experience in Bioinformatics and, possibly, Systems Biology.

Candidates should e-mail their CV, including relevant professional experience and list of publications, a letter of interest, and the names of two potential referees to:
